

Use Case Document: FATCA Declaration in Internet Banking

1. Project Scope

The bank is enhancing its existing Internet Banking facility to support FATCA self-declaration. Customers must provide relevant FATCA/tax-residency information, submit a self-declaration, or postpone submission where the six-month postponement window is still open.

1.1 Use Cases Covered

- Check FATCA status and display FATCA page
- Submit FATCA declaration
- Postpone FATCA declaration

1.2 Actors and Systems

Actor / System	Role
Customer	Logs in to Internet Banking, provides FATCA information, submits the declaration or postpones it.
Internet Banking System	System under consideration; authenticates the customer, displays the FATCA journey and processes the customer's actions.
Core Banking System	Provides the customer's FATCA status and receives the updated Submitted status.

2. Use Case Diagram

The use case diagram represents the FATCA functionality within the existing Internet Banking System, with the Customer as the primary actor and the Core Banking System as the supporting system.

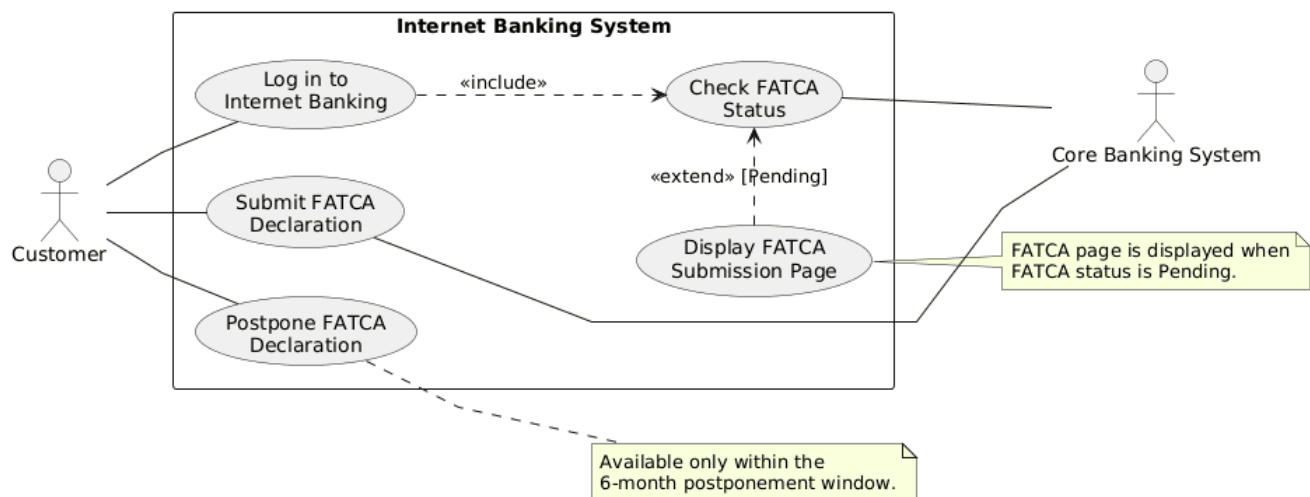

Figure 1: FATCA declaration use case diagram

The five use cases in the diagram are detailed in the three use case specifications in Section 3:

Use case in diagram	Detailed in
---------------------	-------------

Use case in diagram	Detailed in
Log in to Internet Banking	Use Case 1 (steps 1 and 2)
Check FATCA Status	Use Case 1 (step 3)
Display FATCA Submission Page	Use Case 1 (steps 4 and 5, AF2)
Submit FATCA Declaration	Use Case 2
Postpone FATCA Declaration	Use Case 3

3. Use Case Specifications

Use Case Name: Check FATCA status and display FATCA page

Use Case No: 1

Primary Actor: Customer

Secondary Actor: Core Banking System

Use Case Story: This use case enables the bank to check the FATCA declaration status of the customer every time the customer logs in to net banking, and to direct the customer to the FATCA submission page if the declaration is pending.

Trigger: Customer clicking the 'Login' button on the net banking login page

Pre-Condition: Customer is registered for internet banking and the FATCA functionality has been rolled out

Post Condition: Customer is on the FATCA declaration page (status Pending) or on the net banking dashboard (status Submitted)

Primary Flow (PF):

Title: Customer with a pending declaration lands on the FATCA page

Actor Action	System Response
1. Customer enters User ID and Password and clicks 'Login' button (Refer Wireframe 1)	2. System authenticates the credentials If valid, go to next step Else, existing login error handling applies
	3. System retrieves the FATCA status of the customer from the Core Banking System If status is 'Pending', go to next step Else, if status is 'Submitted', go to Alternate Flow 1 (AF1) If the status cannot be retrieved, go to Exception Flow 1 (EF1)
	4. System checks if the postponement window is open (current date is within 6 months of the rollout date) If open, go to next step Else, go to Alternate Flow 2 (AF2)
	5. System displays the FATCA declaration page with 'Submit' and 'Postpone' buttons (Refer Wireframe 2)

Actor Action	System Response
6. If Customer clicks 'Submit' button, go to Use Case 2 Else, If Customer clicks 'Postpone' button, go to Use Case 3	

Alternate Flow 1 (AF1):

Title: FATCA declaration already submitted

Actor Action	System Response
	1. System skips the FATCA page and displays the net banking dashboard

Alternate Flow 2 (AF2):

Title: Postponement window has expired

Actor Action	System Response
	1. System displays the FATCA page without the 'Postpone' button and shows the message: The postponement period has ended. Submission of the FATCA declaration is mandatory to continue. (Refer Wireframe 3)
2. Customer proceeds to submit the declaration, go to Use Case 2	

Exceptional Flow 1 (EF1):

Title: FATCA status cannot be retrieved

Actor Action	System Response
	1. System displays the following error message: Unable to retrieve your FATCA status. Please try again later.
2. Customer clicks 'Retry' button, go to step 3 of PF	

Use Case Name: Submit FATCA declaration

Use Case No: 2

Primary Actor: Customer

Secondary Actor: Core Banking System

Use Case Story: This use case enables the customer to provide the FATCA self-declaration (country of birth, citizenship, tax residency, TIN and US tax liability) and self-attest it from within net banking.

Trigger: Customer is on the FATCA declaration page (Use Case 1)

Pre-Condition: Customer is logged in and the FATCA status is 'Pending'

Post Condition: Declaration is stored and the FATCA status is updated to 'Submitted'; the FATCA page is not displayed on subsequent logins

Primary Flow (PF):

Title: Customer submits the FATCA declaration

Actor Action	System Response
	1. System displays the FATCA form with the customer details pre-filled and read-only, and the declaration fields blank (Refer Wireframe 2)
2. Customer reviews the pre-filled details	
3. Customer selects the Country of Birth	
4. Customer selects the Country (or countries) of Citizenship and, if applicable, the Past Citizenship(s)	
5. Customer selects the Country of Tax Residence and enters the TIN If Customer has tax residency in more than one country, go to Alternate Flow 1 (AF1)	
6. Customer selects 'Yes' or 'No' for 'Any tax liability in the USA?' If 'Yes', go to Alternate Flow 2 (AF2)	
7. Customer selects the self-declaration checkbox	
8. Customer clicks 'Submit' button	9. System validates the mandatory fields and the TIN format If valid, go to next step Else, go to Alternate Flow 3 (AF3)
	10. System saves the declaration with the customer ID and the date and time, and updates the FATCA status to 'Submitted' in the Core Banking System If the save fails, go to Exception Flow 1 (EF1)
	11. System displays a success message with a reference number (Refer Wireframe 5)
12. Customer clicks 'Continue' button	13. System displays the net banking dashboard The FATCA page is not displayed on subsequent logins

Alternate Flow 1 (AF1):**Title:** Customer has tax residency in more than one country

Actor Action	System Response
1. Customer clicks '+ Add another country of tax residence' link	2. System adds a new row for Country of Tax Residence and TIN (maximum 5 rows)
3. Customer selects the country and enters the TIN, go to step 6 of PF	

Alternate Flow 2 (AF2):**Title:** Customer declares tax liability in the USA

Actor Action	System Response
	1. System displays the additional mandatory field 'US TIN (SSN / ITIN)'
2. Customer enters the US TIN, go to step 7 of PF	

Alternate Flow 3 (AF3):**Title:** Validation failed

Actor Action	System Response
	1. System highlights each missing or invalid field and displays an error message below it (Refer Wireframe 4)
2. Customer corrects the data, go to step 8 of PF	

Exceptional Flow 1 (EF1):**Title:** Declaration could not be saved

Actor Action	System Response
	1. System displays the following error message: Unable to submit your declaration. Please try again. The entered data is retained
2. Customer clicks 'Submit' button, go to step 9 of PF	

Exceptional Flow 2 (EF2):**Title:** Session timeout

Actor Action	System Response
	1. System ends the session and displays the login page The entered data is not saved
2. Customer logs in again, go to Use Case 1	

Use Case Name: Postpone FATCA declaration

Use Case No: 3

Primary Actor: Customer

Secondary Actor: None

Use Case Story: This use case enables the customer to postpone the FATCA declaration and continue with net banking, provided the 6-month postponement window after the rollout has not expired.

Trigger: Customer clicking the 'Postpone' button on the FATCA declaration page

Pre-Condition: Customer is logged in, the FATCA status is 'Pending' and the postponement window is open

Post Condition: Postponement is recorded, the FATCA status remains 'Pending', and the customer is on the net banking dashboard

Primary Flow (PF):

Title: Customer postpones the FATCA declaration

Actor Action	System Response
1. Customer clicks 'Postpone' button (Refer Wireframe 2)	2. System checks if the postponement window is open If open, go to next step Else, go to Alternate Flow 1 (AF1)
	3. System displays a confirmation pop-up showing the last date up to which the declaration can be postponed (Refer Wireframe 6)
4. Customer clicks 'Confirm' or 'Cancel' button If Confirm, go to next step Else, if Cancel, go to Exception Flow 1 (EF1)	
	5. System records the postponement (customer ID, date and time) and retains the FATCA status as 'Pending' If recording fails, go to Exception Flow 2 (EF2)
	6. System confirms the postponement and closes the pop-up
	7. System displays the Internet Banking dashboard The FATCA page is displayed again at the next login

Alternate Flow 1 (AF1):

Title: Postponement window has expired

Actor Action	System Response
	1. System hides the 'Postpone' button and displays the following message: The postponement period has ended. Submission of the FATCA declaration is mandatory to continue. (Refer Wireframe 3)
2. Go to Use Case 2	

Exceptional Flow 1 (EF1):

Title: Customer clicks 'Cancel' button

Actor Action	System Response
1. Customer clicks 'Cancel' button	2. System closes the pop-up and the customer remains on the FATCA page (Refer Wireframe 2)

Exceptional Flow 2 (EF2):

Title: Postponement could not be recorded

Actor Action	System Response
	1. System displays the following error message: Unable to postpone at this time. Please try again. The customer remains on the FATCA page
2. Customer clicks 'Postpone' button, go to step 1 of PF
